Updates

Potential Mastercomfig fix 6mo

Bugfix

```
POTENTIALLY fixed
Mastercomfig crashing
under medium or lower
(It also makes no
fucking sense)
```

Files

- quickprecache_4c37c.zip

who gives a fuck download it 6mo

Improvement

Dynamic chunksize fix 2.5.1 6mo

Bugfix

Dynamic chunksize 2.5.0 6mo

Amendment

I'm throwing shit at a wall at this point 2.4.1 6mo

Addition

THIS AIN'T YOUR GRANDMA'S PRECACHER

PREREQUISITES

- Java 17 or higher (open invitation to write an app outside of java)

INSTALLATION (READ CAREFULLY)

1. Download QuickPrecache.zip
2. Copy the contents of QuickPrecache.zip to the root folder of your TF2 installation.

3. Run quickprecache_auto.bat* (REQUIRED FOR EVERY TIME YOUR MODS CHANGE)

4. Add '+exec preloader' to your launch parameters

5. Run the game!

*If `quickprecache_auto.bat` doesn't work/crashes on startup, try using `quickprecache_full.bat` instead

PROS

1. Almost no additional startup time (besides the time inherently added by modding)

2. Model mods work

3. Animation mods work

CONS

1. Requires 'Casual Compatible' TF2 mods

2. Crashes under configs that change r_lod or r_rootlod (This is an engine bug and cannot be fixed)

3. It is unknown what other convars that QuickPrecache will crash under, exercise caution when using configs

4. I'm literally just not gonna help you

ADDITIONAL NOTES

1. Manually setting sv_pure on the client will reset all non-animation models

I intend to try to fix the issues with black models when I get the chance, I'm just not gonna do it rn.

Cheers x1 **Thanks** x2
